SUMMARY

Mobile engineer with 4 years of production experience building D2C consumer apps on Android and iOS using React Native and TypeScript. Delivered apps across e-commerce, food & hospitality, and digital signage — serving 100K+ end users. Strong focus on real-time features, mobile performance (99.8% crash-free sessions), geolocation integration, push notifications, and release engineering (Fastlane, CodePush, GitHub Actions). Based in Chennai, open to joining a local mobility startup and contributing to consumer-facing ride-hailing applications from day one.

WORK EXPERIENCE

IntuitionX — SDE II — React Native & Full-Stack (Contract)

Remote

Mar 2026 – Present

- Building cross-platform React Native features end-to-end for iOS and Android, integrated with React web and Node.js backend services.
- Own CI/CD pipelines (Fastlane + GitHub Actions) for Play Store and TestFlight; maintain multi-environment release cadence with rollback handling.
- Writing native Kotlin (Android) and Swift (iOS) modules for platform-specific features including push notification handling and deep linking.

Concentrix — SDE II — React Native, iOS & Android

Chennai

Oct 2024 – Jan 2026

- Built shared React Native infrastructure modules (networking, auth, theming, push notifications) adopted across 5+ consumer apps — reduced duplicated logic ~60%.
- Reduced JS-thread interaction latency ~35% through render optimization, memoization, and FlatList virtualization; profiled using Flipper and Hermes.
- Fixed memory leaks via Android Studio Profiler and Xcode Instruments — OOM crashes down ~30%, crash-free sessions up to **99.8%**.
- Automated Fastlane CI/CD with staged Play Store rollouts and CodePush OTA — halved release cycle time. Led Crashlytics-driven crash triage and hotfix rollouts.
- Wrote native Kotlin and Swift modules for platform-specific features including background location services and FCM/APNs notification handling.

eShakti — SDE I — React Native, iOS & Android

Chennai

May 2023 – May 2024

- Built and scaled a **D2C fashion e-commerce app** serving US consumers directly — grew to **100K+ installs** on Android and iOS. Improved app startup time ~25% and rendering on low-tier devices.
- Integrated REST APIs for product catalogue, cart, checkout, and order tracking — real-time order status updates with push notifications via FCM and APNs.
- Shipped JS fixes via CodePush OTA without store resubmission, cutting production issue resolution from days to hours. Ran A/B tests and beta releases to validate UX and conversion changes.

Foodhub — Software Engineer — React Native

Chennai

Jul 2022 – Mar 2023

- Built a **D2C consumer-facing app** for digital menu boards and food ordering, serving **50K+ end users** across restaurant and hospitality locations.
- Implemented real-time content sync and media playback pipelines optimised for low-end Android devices; integrated AWS S3 for media storage and Firebase Cloud Functions for backend processing.
- Reduced cold-start time ~30% via bundle optimization, lazy loading, and image handling; automated Play Store and TestFlight releases with Fastlane and CodePush OTA.

Colan Infotech — Android/iOS Developer Intern

Chennai | Sep 2020 – Jun 2022

PROJECTS

DigiSlides — D2C Menu & Content Management Platform

Google Play | 2023

- Built a **D2C digital signage platform** — React Native mobile CMS enabling businesses to manage and push menus, promotions, and content directly to consumers on Android TV displays.
- Implemented remote content sync, real-time updates, and optimised media playback across multi-device deployments. Stack: React Native · TypeScript · Android TV · Node.js

VectorDB — Self-Hosted Vector Search

github.com/lachu97/vector-db | Apr 2026 – Present

- Built a self-hosted vector database with multi-tenant support, REST APIs, auth, and a RAG pipeline. Sub-0.6ms p95 search via pgvector HNSW indexing.
- Stack: Python · FastAPI · PostgreSQL · pgvector · React · Docker

react-native-securekv — Published NPM Package

npmjs.com/package/react-native-securekv | 2024

- Open-source encrypted key-value storage for React Native using Android Keystore and iOS Keychain. Published on npm, used for secure token storage in production apps.

SKILLS

Mobile: React Native, TypeScript, JavaScript, Flutter (familiar), Kotlin, Swift, Redux Toolkit, React Query, Reanimated, React Navigation, Hermes, MMKV

Real-Time & Location: FCM, APNs, Push Notifications, Deep Linking, WebSockets, Geolocation APIs, Firebase Realtime DB, Background Services

Backend & APIs: Node.js, FastAPI, REST APIs, GraphQL, SQLAlchemy, AWS S3, Firebase Cloud Functions

CI/CD & DevOps: GitHub Actions, Fastlane, CodePush, Docker, AppCenter, Gradle, CocoaPods

Testing & Observability: Jest, Detox, Crashlytics, Sentry, Flipper, Android Studio Profiler, Xcode Instruments

Databases: PostgreSQL, pgvector, Firebase, AWS S3

Architecture: System Design, Performance Optimization, OTA Updates, Multi-tenancy, Caching

EDUCATION

B.Tech + M.Tech, Computer Engineering

2015 – 2020

Indian Institute of Information Technology, Design and Manufacturing — Kancheepuram
